

Hydraulic Boom Lift Attachments

Hydraulic Boom Lift Attachment - Boom lifts are equipment that has a platform that can be lowered or raised to many heights, thus making this piece of equipment an important requirement in a wide range of professions. Offered in several particular kinds such as aerial hoists, scissor lifts, and knuckle boom lifts, each type functions very specifically.

Aerial platform lifts are most regularly utilized to carry people at skiing lodges who are not comfortable using a ski lift. These platform lifts operate much like an elevator, skiers can be slowly but surely shuffled up the mountain, stopping at stations along the way until they contact the top. Aerial platform lifts are also utilized in construction, transporting personnel securely up and down the sides of multi-level construction sites.

Scissor hoists are also in the boom lift class. They are used regularly by service companies as an ideal way to allow staff to finish maintenance and repair on wires and cables that are attached to poles. Phone, cable television and power providers have relied on the proficiency of this type of boom jack for years.

The knuckle boom lift is built for use within locations of bumpy terrain and where the need to change direction might be necessary. This style of boom jack has the ability to fit in tight spots where a scissor lift cannot fit. Working amid numerous machines in a production plant or in near proximity between two walls, the knuckle boom also features a standard platform fitted with rails for security and worker safety.

The kind of boom jack required by businesses will usually depend on the nature of the job required. Fortunately, there are suitable versions for practically any task.
