

## Utility Bucket

Utility Bucket - "Slip on the forks" attachment buckets or Universal Fit buckets can be used along with whichever design or model of extendable reach lift truck. If your unit can't be matched with a quick-tach component, another new or second-hand universal fit bucket can be located in its place. Typical universal forklift buckets connect to blades which are up to six inches wide and are forty eight inches long. Bigger fork pockets could be ordered through an account executive upon request.

Because they slip directly onto the forks, universal fit buckets stay on the equipment and are less susceptible to destruction. Compared to the quick-tach container models, universal fit buckets are fifty percent. This extra room makes them ideal for lifting irregular shaped loads like for example backfilling behind walls, tearing off roof trash, elevating roof gravel, moving large debris piles and broken up concrete.

## Quick-Tach Buckets

Quick-Tach Buckets are made for extendable-reach forklifts. They are made to allow positioning of material far beyond the reach of a loader. A hardened beveled cutting blade on the leading edge and on both sides reinforces stability, resistance to wear and offers supreme durability. Quick-Tach forklift buckets are reinforced by scuff bars along the base of the unit which shield it from scrapes.

Quick-Tach forklift buckets can be used to replace the carriage and blades that weigh between 100-700lbs. When installed, these buckets free up more of the unit's load capacity, enabling it to deal with heavier and larger supplies. The Quick-Tach can dump items about 1.5 feet higher thanks to the shorter depth of its bucket. These buckets are built in a customized fashion to be able to suit all the specifications of particular models and makes of lift trucks. It is essential to consult a construction equipment specialist to be able to find the modified Quick-Tach bucket solution for all of your needs.

Forklift bucket accessories are great for construction work on the ground level. They could be used to transfer snow in the northern areas, gravel and also sand. Clean-up on the jobsite can be also be done with a lift truck bucket. The many purposes the bucket could complete saves the company more time and money in view of the fact that it does have to completely switch tools or machines and this could help prevent running into overtime.
