

## Toyota Forklift Parts

Toyota Forklift Parts - Ever since 1992, Toyota Material Handling inc., U.S.A., also known as TMHU, continues to be the best selling lift truck supplier in the United States. Proudly celebrating more than 40 years of performance, the Irvine, California based company presents an extensive line of quality lift trucks. Attributable to their status of superiority, reliability, and resilience, Toyota remains popular in this competitive market. Quality is the cornerstone of Toyota's legendary Toyota Production System practiced at all manufacturing facilities, including TIEM, which is stands for Toyota Industrial Equipment Manufacturing, situated in Columbus, Indiana. The majority of the Toyota lift trucks sold in the U.S.A are built here.

Every one of Toyota's manufacturing facilities within Canada and the U.S. comply with the International Organization for Standardization or ISO 14001 standard. TIEM has been honored many times for its commitment to constant development, and its environmental systems. It is the first and only maker to offer EPA and CARB-certified Compressed Natural Gas powered lift trucks on the market. For instance, the Toyota 8-Series IC lift trucks emit 70% less smog forming emissions than the existing federal EPA standards and have complied with California's strict emission standards and policies.

### Toyota Material Handling, U.S.A. - The Industry Leader

The head of Toyota Material Handling, U.S.A., Brett Wood feels that TMHU's achievement comes from its dedication to create high quality lift vehicles while providing first-rate customer assistance and service. "We must be able to learn and predict the needs of our customers," said Brett Wood. "As a leader, our success also depends on our ability to address our customers' operational, safety and environmental cost issues." TMHU's parent company, Toyota Industries Corporation, also known as TICO, is listed in Fortune Magazine as the world's biggest lift truck provider and is among the magazines impressive World's Most Admired Companies.

### Redefining Environmental Responsibility

Toyota Industries Corporation, as the parent company, has instilled a rich company doctrine of environmental stewardship in Toyota. Not many other companies and no other lift truck maker can match Toyota's history of protecting the natural environment while concurrently encouraging the economy. Environmental accountability is a key feature of company decision making at Toyota and they are proud to be the first and only maker to offer UL-listed, EPA - and CARB -certified Compressed Natural Gas powered lift vehicles. Yet one more reason they remain a leader within the industry.

In 2006, Toyota introduced the 8-Series line. The 8-Series signifies both Toyota's innovation and leadership in the industry. It features an exclusive emission system that surpasses Federal EPA emission values, and also meets California's more involved 2010 emission standards. The end creation is a lift vehicle that creates 70% fewer smog forming emissions than the existing Federal standards allow.

Also starting in 2006, collectively with the Arbor Day Foundation, Toyota added to its dedication to the natural environment. To this day more than 58,000 trees have been embedded in the ground throughout national forests and neighborhood parks that were damaged by fires and other environmental causes. 10,500 seedlings have also been spread through Toyota Industrial Equipment's network of dealers to non-profit organizations and local customers to help sustain communities all over the U.S.

Toyota's lift vehicles offer enhanced output, visibility, ergonomics and durability, and most notably, the industry's leading safety technology. The company's System of Active Stability, also called "SAS", helps reduce the possibility of accidents and injuries, and increasing productivity levels while minimizing the potential for product and equipment damage.

System Active Stability senses numerous aspects that might lead to lateral insecurity and likely lateral overturn. When one of those factors are detected, SAS instantly engages the Swing Lock Cylinder to stabilize the rear axle. This adjusts the lift truck's stability footprint from triangular in shape to rectangular, providing a major increase in stability which substantially reduces the probability of a mishap from a lateral overturn. The Active Mast Function Controller or the Active Control Rear Stabilizer also aids to prevent injuries or accidents while adding durability.

SAS was first launched to the market on the 7-Series internal combustion models in 1999 and subsequently catapulted Toyota into the industry leader for safety. Ever since then, SAS continues to be integrated into the majority of Toyota's internal combustion models. It is standard equipment on the new 8-Series. There are more than 100,000 SAS-equipped lift trucks in operation, exceeding 450 million hours combined. The increased population of SAS-equipped vehicles in the field, along with compulsory operator education, overturn fatalities across all brands have decreased by 13.6% since 1999. Furthermore, there has been an overall 35.5% fall in industry wide collisions, loss of control, falls and tip overs from a lift vehicle for the same period.

Toyota's pattern of brilliance reaches far beyond its technological achievements. The company maintains a widespread Operator Safety Training curriculum to help customers meet OSHA standard 1910.178. Training programs, video lessons and a variety of materials, covering a broad scope of matters-from personal safety, to OSHA rules, to surface and cargo conditions, are available through the vendor network.

Ever since the sale of its first lift truck in the U.S. to the manufacture of its 350,000th lift vehicle produced in 2009 at Toyota Industrial Equipment Manufacturing, TMHU has sustained a solid existence in the U.S. This reality is demonstrated by the statistic that 99% of Toyota lift trucks sold in America today are built in the United States.

TMHU is based in Columbus Indiana and houses nearly 1 million square feet of production facilities over 126 acres of land. Facilities include a National Customer Center, as well as manufacturing operations and supply centers for equipment and service

components, with the whole investment exceeding \$113 million dollars.

The modern NCC was designed to function for TMHU clients and dealers. The facility includes a 360-degree showroom, a presentation theater complete with stadium seating for 32, an section for live product demonstrations with seating capacity for 120; a presentation theater; Toyota's Hall of Fame showcasing Toyota's story since the birth of its creator, Sakichi Toyoda, in 1867, and finally a training center.

TMHU has 68 official industrial equipment dealers, along with 189 dealership locations throughout the United States, providing the most comprehensive and inclusive client support and customer service in the industry. The company's new and Certified Used lift trucks, service, parts, and financing capabilities make Toyota dealerships a one-stop shop to ensure overall customer satisfaction.
